Application Security

24X7SYSTEMS helps Commercial Enterprise, Public Sector and Government agencies efficiently comply with the most stringent regulatory requirements, secure critical applications and access to sensitive data.

- Our IAM solutions are based on Oracle Identity and Access Management stack.
- We implement central Authentication and Authorization for applications.
- We specialize in providing authentication, directory services, single sign-on and fine-grained authorization to control and manage identities and access to your confidential data assets.
- Design and implement Centralized Authentication and Authorization for applications.
- Design and Implement User Provisioning workflows, Password Complexity guidelines.
- Design and Implement Single Sign On using industry standard SAML 2.0, OAUTH 2.0, OpenID Connect.
- Design and implement 2 factor authentication for applications.
 - Review Security Implementations and give recommendations
 - IAM Design and Implementation Services
 - Give recommendations and roadmap for IAM implementations.

Commercial Products

- Oracle Access Management
- Oracle API Gateway
- Oracle Identity Manager
- Oracle Unified Directory
- Oracle Entitlement Server
- Microsoft Active Directory
- Microsoft ADFS

Open Source Products

- OpenAM (Access Management)
- OpenIDM (Provisioning)
- OpenDJ (Directory Services)

Database Security

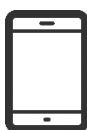

Provide guidelines and implementation for Data Security in transit and at rest with industry standard encryption techniques

- Integration of Database Security with Corporate directories
- Implementing Data Security
- Oracle Enterprise User Security
- Oracle Advanced Security
- Oracle Data Masking
- Oracle Audit Vault and Database Firewall
- Oracle Virtual Private Database

AWS Cloud Security

- Cloud environment Security Evaluation and recommendations
- Encryption standards for Data in transit and rest
- Disk Encryption standards
- Design and Implement AWS Security with Amazon VPC, VPN (Open Source or commercial), firewall rules and security groups
- Integrating Cloud environment with Corporate Directory Services

Cyber Security – Vulnerability Services

24X7SYSTEMS helps Commercial Enterprise, Public Sector and Government agencies, efficiently comply with the most stringent regulatory requirements, by securing the IT Infrastructure assets, critical applications and access to sensitive data.

Our Vulnerability Assessment services use commercially available utilizing Qualys, Rapid7, Nessus, apart from open source tools like OpenVAS, Nmap etc.

We specialize in providing the entire vulnerability life cycle management from asset inventory, discovery, vulnerability gaps assessment, and remediation options.

We also provide services to automate vulnerability scans and report on potential risks

We implement Security Information and Event Management tools, integrating them with IT infrastructure and providing alerts based on established risk profiles.

We provide automated processes for firewall checks, and also offer internal penetration testing services.

We help federal government or contractors assess the current state of information security controls based on FISMA, NIST and OMB guidelines; DOD8510DICAP, DODD 8100.1, DODD8500.01E, FIPS 140-2 and RMF

We help financial institutions, health care agencies assess information security controls based on the security standards (NIST 800-53, PCI, and HIPAA)

Commercial Products

- QualysGuard
- Nessus
- Tripwire IP360
- Rapid7
- ArcSight (SIEM)
- Skybox

Open Source Products

- Nmap
- OpenVAS
- Wireshark
- Hping

IT Infrastructure Security

Provide architecture, design and implementation services for IT Infrastructure in line with any security policies and standards. Provide network segmentation and tokenization options to secure sensitive data.

IT Infrastructure Security Capabilities

- Implementing CyberArk to protect privileged user accounts
- Architect and Design different security zones to reduce risk exposure
- LDAP and Active Directory for centralized user administration
- Implementation of IPS and IDS devices
- Development of Standard OS images based on Security policies and standards or based on CIS (Center for Internet Security) benchmarks
- Providing standard router, firewall and other device configurations to suit any security standard
- Develop automated processes for patch management
- Infrastructure Design Reviews based on security standards
- IT Infrastructure security evaluation and recommendations
- Experienced in PCI, SOX audit processes
- Design a configuration management system to maintain systems configuration standards
